# Yassin Benelhajlahsen

US Citizen | New York, NY | (646) 705-6069 | yassinbenelhajlahsen@gmail.com | LinkedIn | yassinb.me

## Experience

**Software Engineer** Sept 2026 – Present
*Associated Environmental Systems* *Remote*

- Converted to full-time after the summer internship, continuing on the same compliance platform for calibrating and servicing environmental test chambers. Now owns certificate generation and calibration correctness end to end, from data model through what gets shown to the customer.

**Software Engineer Intern** June 2026 – Sept 2026
*Associated Environmental Systems* *Remote*

- Built a field-service-report platform on Next.js server actions and jsPDF export, retiring a manual GoFormz workflow; closed price-tampering and double-submit gaps from security review with race-reproducing tests.
- Gated 34 unprotected calibration and FSR write paths behind zod-validated RBAC server actions and blocked self-approval on certificate release; consolidated six divergent pass/fail implementations into one canonical rollup, eliminating certificates that printed FAIL for readings the UI showed as passing.

**Software Engineer Intern** June 2025 – June 2026
*Soaper* *Remote*

- Led end-to-end Surescripts e-prescribing certification; identified and resolved critical bugs in prescription routing, renewal response handling, and async message processing to achieve full certification for a live EMR.
- Built and maintained backend services including EC2 deployments via systemd and Celery task queues for async prescription workflows, shipping 15+ production features alongside physicians and clinical staff.

## Projects

**Scorva** | *React, JavaScript, Express.js, Redis, Supabase, PostgreSQL, Prisma, OpenAI, Jest*

- Built an agentic AI chat assistant with a multi-turn tool-calling loop across 12 tools, including semantic RAG over vector embeddings. Streamed responses via SSE with conversation summarization for context management.
- Implemented a player similarity engine using pgvector: computed 14-dim z-score normalized stat vectors per player per season and indexed them with HNSW for sub-millisecond cosine similarity lookup.
- Architected a two-tier live sync system: a 15-second polling cycle for scoreboards and a 2-minute cycle for full box scores, pushed to the browser via PostgreSQL LISTEN/NOTIFY over SSE with automatic REST fallback on connection failure.

**Recvr** | *Next.js, TypeScript, Supabase, PostgreSQL, Prisma, Redis, OpenAI, Vitest, PlayWright*

- Built a real-time recovery engine computing per-muscle fatigue from a 96-hour rolling window with volume-adjusted decay curves, cumulative fatigue stacking, and HSL-interpolated SVG body maps. Cached in Redis (5-min TTL), cutting 80% of redundant DB reads
- Streamed AI suggestions via NDJSON with chunk-boundary-safe parsing, integrated Groq Whisper for voice logging, and enforced Redis-backed cooldowns and rate limiting, cutting redundant AI calls by 90%.

## Education

**CUNY Brooklyn College** June 2026
*Bachelor of Science in Computer Science* *New York, NY*

- GPA 3.6/4.0

## Technical Skills

**Languages:** JavaScript, TypeScript, Python, Java, C++, SQL
**Backend & Testing:** Node.js, Express.js, Next.js, Nest.js, FastAPI, Celery, PostgreSQL, pgvector, Redis, REST API, Prisma, SQLAlchemy, Jest, Vitest, PlayWright, Pytest
**Frontend:** React, React Native, Expo, Tailwind CSS, Zustand
**Tools & Platforms:** Git, GitHub Actions, CI/CD, Docker, Vercel, Railway, Firebase, Supabase, Stripe, OpenAI, AWS (EC2, S3), Agile/Scrum
